# Hydraulic Angle Notching Machine

- ▶ Adjustable cutting angle
- ▶ Fast cutting speed
- ▶ Fast Positioning System
- ▶ Low noise, High efficiency

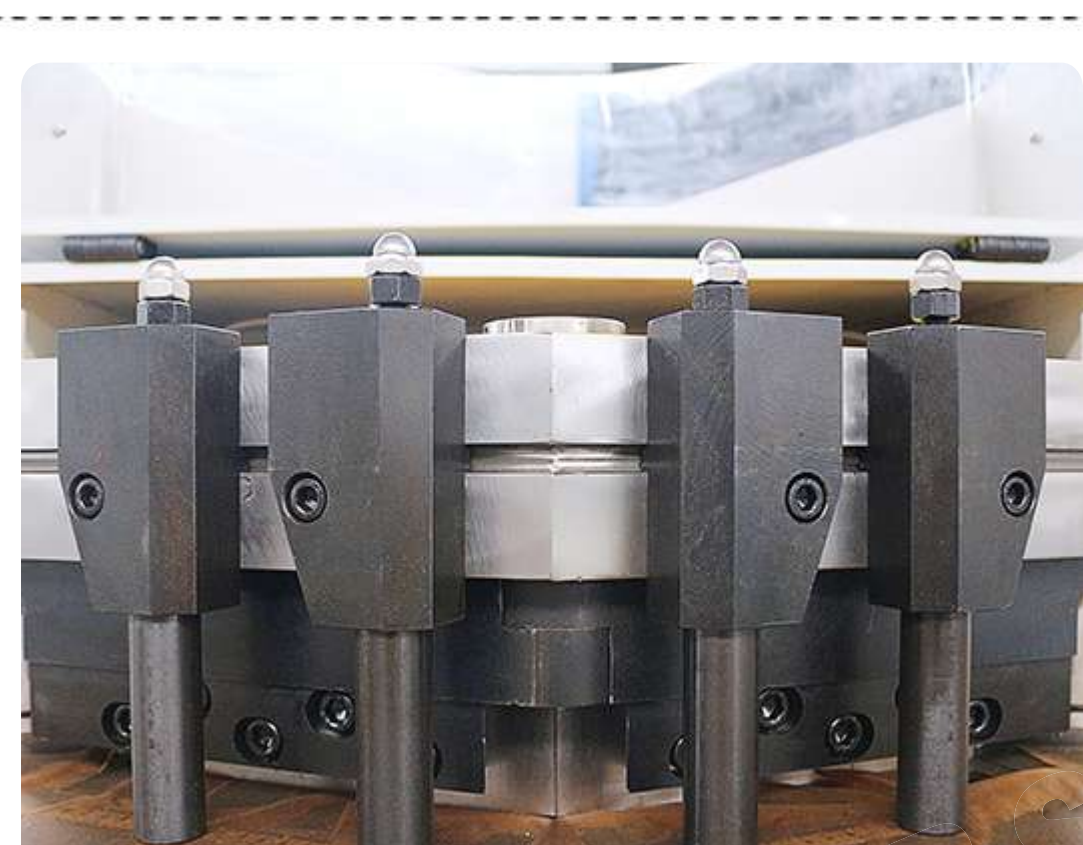

## Blades fasten system

- Hydraulic lock system can fix any certain blade cutting angle precisely and tightly.

## Upper down blade

- Exchanging the upper and bottom blade installation positions can get the cutting angle from 40° to 135°

## Sheet metal clamps

- Two rows of metal sheet presser can fix the sheet firmly during cutting process

## Sheet metal positioning system

- Precise positioning system with ruler can adjust the cutting location quickly and accurately

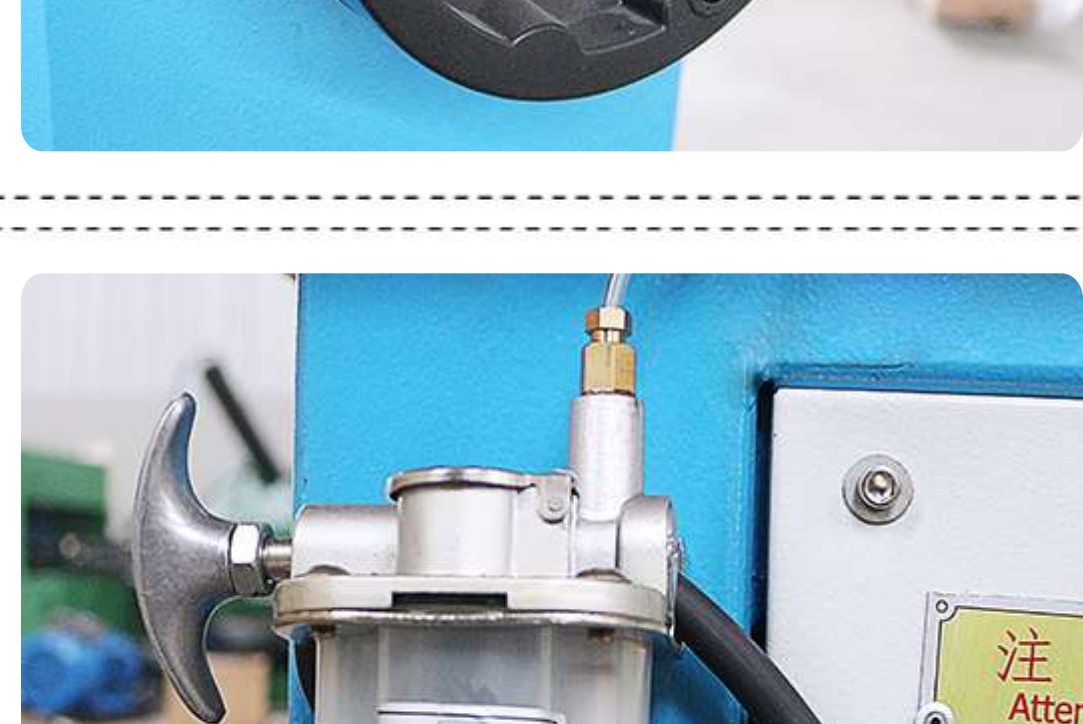

## cutting positioning scale

- Acquire specific cutting angle by the positioning scale

## Blade adjusting crank

- Changing the cutting angle easily by rotating the crank at both sides

## Oil Lubrication

- Lubricate the whole working process by this oil tank and keep the machine working in good condition

## Discharge Port

- Material will come out from this port after being cut by blades

## Foot switch

- Control the cutting process with easy operation by each step

## QX28Y Adjustable angle Hydraulic Notching Machine

QX28Y adjustable angle hydraulic notching machine can cut angle from 40° to 135° with high cutting accuracy. This machine can cut symmetrical or asymmetrical shapes smoothly and accurately
